1. Introduction

This Self-Management Toolkit is developed to support Aphrodite's Harvest in independently managing its website and social media platforms without requiring external technical assistance.

The toolkit provides clear, step-by-step guidance on updating content, maintaining an effective online presence, and applying basic digital best practices. It is specifically designed for a small business context with limited time and technical expertise.

2. Toolkit Objectives

The key objectives of this toolkit are to:

- Enable independent management of website content
- Support consistent and effective social media engagement
- Improve basic search engine visibility
- Provide simple and sustainable digital management practices

3. How to Use This Toolkit

To achieve the best outcomes:

- Follow each section step-by-step
- Apply recommendations gradually
- Update content regularly
- Use this toolkit as a reference for ongoing website and social media management

4. Educational Framework Implementation Guide

This section provides a practical guide for structuring and managing website learning content using a clear Educational Framework. The purpose is to enable the business owner to independently organise, update, and maintain course content in a way that improves user experience, supports learning progression, and enhances overall website usability.

Full Reports and Supporting Documents

The complete evidence, screenshots, Prototype, charts, recommendations, and supporting detail are available in the two two links below.

4.1. Learning Level Structure

All courses should be organised into four distinct learning levels. This structure creates a clear progression pathway for users and helps them identify where to begin and how to advance.

Defined Levels:

- **Level 1 – Beginner**
Covers foundational knowledge and introductory concepts (e.g., Beekeeping Essentials).
- **Level 2 – Intermediate**
Focuses on practical skills and seasonal hive management.
- **Level 3 – Specialist**
Includes advanced topics such as pest control, disease management, and problem-solving (e.g., Varroa mite management).
- **Level 4 – Advanced**
Provides continued learning opportunities, deeper expertise, and specialised knowledge.

Instructions:

- Assign each course to one appropriate level only.
- Ensure the difficulty increases progressively across levels.
- Avoid placing beginner and advanced content within the same course.

4.2. Course Structure Design

Each course should follow a consistent internal structure to improve clarity and usability.

Standard Structure:

Course → Modules → Lessons

Implementation Steps:

1. Create a course under the appropriate learning level.
2. Divide the course into **3-5 modules**, each covering a specific topic.
3. Break each module into smaller lessons focusing on individual concepts.

Example:

- Module 1: Introduction to Hive Management
- Module 2: Seasonal Hive Care
- Module 3: Identifying Common Issues

4.3. Lesson Content Development

Lessons should be designed to be simple, practical, and easy to follow.

Guidelines:

- Focus on one key concept per lesson.
- Use clear, non-technical language where possible.
- Include practical instructions or real-world examples.
- Keep content concise and avoid long paragraphs.

Recommended Content Elements:

- Short explanation
- Step-by-step instructions
- Practical tips or examples

4.4. Information Architecture (Content Organisation)

The framework follows a hierarchical structure to improve navigation and content discovery.

Hierarchy:

- Learning Levels
- Courses
- Modules
- Lessons

Purpose:

- Ensures content is logically grouped
- Helps users easily locate information
- Reduces confusion and cognitive load

Best Practice:

- Maintain consistent naming across all levels

- Avoid duplicating content across multiple levels
- Keep navigation simple and predictable

4.5. Support Services Management

Support services must remain separate from the learning content but can be recommended when needed.

Types of Support Services:

- Consultation (one-on-one advice)
- Mentoring (hands-on guidance)
- Workshops (practical sessions)

Instructions:

- Do not include support services inside course content.
- Instead, provide suggestions where relevant.

Example:

“If you need help applying for this lesson, consider booking a mentoring session.”
This approach maintains system clarity while supporting practical learning.

4.6. Step-by-Step Course Setup Process

Use the following process when adding or updating a course:

1. Identify the correct learning level
2. Create or update the course page
3. Define course modules
4. Add lessons under each module
5. Review content for clarity and simplicity
6. Check alignment with learning level
7. Publish or update the course

4.7. Best-Practice Checklist

Before publishing or updating any course, ensure the following:

- Course is assigned to the correct learning level
- Content is written in clear and simple language
- Modules are logically structured
- Lessons are concise and focused

- No unnecessary technical complexity is included
- Course flow supports user progression

4.8. Maintenance Schedule

Regular maintenance ensures the website remains accurate, relevant, and user-friendly.

Weekly Tasks:

- Review course information for accuracy
- Fix any broken links or outdated content

Monthly Tasks:

- Evaluate course structure and organisation
- Improve clarity of lessons where needed

Quarterly Tasks:

- Add new courses or modules
- Update existing content based on user needs or feedback

4.9. Benefits of the Framework

Implementing this Educational Framework will:

- Improve website organisation and navigation
- Support user learning progression
- Reduce user confusion
- Enable independent website management
- Enhance overall customer experience

4.10. Summary

This Educational Framework provides a structured yet flexible approach to managing website learning content. By following the steps, guidelines, and maintenance practices outlined above, the client can independently maintain a clear, scalable, and user-friendly learning system

5. Website UX Audit, Competitor Analysis and Improvement Insights

This section explains what is already working, what may confuse customers, and what to improve first. It combines a review of the current Aphrodite's Harvest website with lessons from 13 similar websites.

Use this as a practical guide when updating the website. The full research reports are linked below for anyone who needs the detailed evidence.

Full Reports and Supporting Documents

Aphrodite's Harvest Website UX Audit and Improvement Report: [Open the full website review](#)

Competitor Website UX and Public Effectiveness Analysis: [Open the full competitor review](#)

5.1 What Was Reviewed

- **The current website:** The homepage, menus, Courses, Support, Shop, Contact, repeated page sections, and the mobile view were checked.
- **Similar websites:** Thirteen honey, beekeeping, education, and local business websites were reviewed to see what made them clear, trustworthy, and easy to use.
- **What we looked for:** We checked whether visitors could understand the website, find the right information, contact the business, learn about beekeeping, and complete a booking or purchase without confusion.
- **How to use the findings:** The results are a guide based on information that anyone can see online. They show useful patterns, but they do not include private sales figures or interviews with customers.

5.2 Current Website: What Works and What to Improve

What Is Working:

- **The main offer is clear:** Visitors can quickly see that Aphrodite's Harvest provides beekeeping training and support.
- **Important sections are available:** Courses, support, shopping, events, business information, and contact details can all be reached from the main menu.
- **The website feels local and experienced:** The business story, Adelaide focus, relevant images, and service information help build confidence.

What May Confuse Visitors:

- **The top of the homepage is:** The large image, decoration, menu, phone button, heading, and several buttons compete for attention.
- **The menu does not always behave reliably:** When the page is scrolled, menu items and the phone button can overlap. Some items may also be difficult to click.
- **There are too many actions at the same time:** Visitors may see options to browse courses, get support, call, leave a review, and complete a form together. This makes the next step less clear.
- **The Courses page gives two different instructions:** It asks visitors to register their interest but also offers direct purchase buttons. Visitors may not know which action to take.
- **Some sections are repeated too often:** Similar contact forms and action blocks appear on several pages, making the pages feel repetitive.
- **The mobile view needs simplifying:** The menu and homepage are crowded, decorative images take up too much space, some footer text is difficult to read, and long paragraphs are harder to scan.
- **Some wording is inconsistent:** Use "Beekeeping" consistently instead of switching between "Bee Keeping" and "Beekeeping".

What to Change First:

1. **Fix the menu:** Keep menu buttons evenly spaced, place the phone button separately, and check that every item remains visible and clickable while scrolling.
2. **Make each section lead to one main action:** Choose the most useful button for each section. Move less important actions lower on the page.
3. **Choose one clear course process:** Decide whether visitors should buy a course directly or send an enquiry first. If both options are needed, clearly explain when to use each.
4. **Check every page on a phone:** Look for overlapping items, text that is difficult to read, buttons that are hard to tap, and content that runs off the side of the screen.

5.3 Lessons from Similar Websites

The charts use the term "UX". In simple terms, this means how easy a website is to understand and use.

Websites That Were Easy to Use:

Beeman Honey, Hayes Honey, WildEarth Beekeeping, and Flow Hive were strong examples of clear menus, useful buttons, and simple paths to information or actions.

Websites With Strong Online Results:

Beeman Honey, Beerenberg, The Basin Backyard, Beechworth Honey, and Flow Hive performed well in areas such as loading speed, search visibility, reviews, and public trust.

What Seemed to Help Most:

- **A consistent appearance:** Buttons, colours, text, and page spacing should look and behave the same throughout the website.
- **Easy contact:** Visitors should be able to find the phone number, contact page, or form quickly.
- **Clear steps:** Each page should guide visitors naturally from reading to the next useful action.
- **Simple menus:** Main choices should be easy to scan, with less important links placed underneath.

Common Problems Found:

- **Trust information was often missing (61.5%):** Many websites did not clearly show reviews, real photos, qualifications, local information, or other reasons to trust the business.
- **Products and services were difficult to find (46.2):** Visitors could not always find products, courses, prices, or booking options quickly.
- **Learning information was not well organised (36.4%):** Useful information existed, but it was not arranged as a clear path for beginners.
- **The homepage or page design was unclear (30.8%):** Some websites did not explain their purpose quickly or use the same design across pages.

Use these websites for ideas, but do not copy one website in full. Choose the clearest parts from several examples and adapt them to Aphrodite's Harvest.

5.4 Step-by-Step Improvement Guide

- **Step 1: Simplify the homepage**
Use one short sentence to explain the business. Show two main choices, such as Shop and Learn. Move other buttons further down the page.
- **Step 2: Make the menu easy to scan**
Keep the main menu short. Use clear names, group related pages together, and keep the phone action separate from the page links.
- **Step 3: Make course choices clear**
For every course, show who it is for, what it covers, the date or format, the price, and one clear booking or enquiry button.
- **Step 4: Create a simple learning path**
Group learning pages under clear choices such as Start Here, Beginner Resources, Courses, Guides, and Advanced Topics.
- **Step 5: Show reasons to trust the business**
Add recent reviews, real photos, local experience, contact details, qualifications, and useful partnerships where visitors can easily see them.
- **Step 6: Improve the phone experience**
Use readable text, large buttons, short paragraphs, simple images, and enough space between items. Remove anything that overlaps or runs off screen.
- **Step 7: Make pages easier to find and read**
Give every page a clear name and heading. Use words customers are likely to search for, keep paragraphs short, and explain one topic at a time.
- **Step 8: Complete a monthly website check**
Test the menu, forms, phone number, course buttons, shop, and important links. Remove old dates, replace outdated information, and check the website on both a computer and a phone.

5.5 Example Customer Journey and Website Demo

1. **Understand:** A beginner opens the homepage and immediately sees that the website offers products, courses, and learning support.
2. **Choose:** They select Shop, Start Learning, or Get Support without searching through several pages.
3. **Learn:** A short beginner guide explains the topic and suggests the most useful next step.

4. **Take action:** The visitor can buy a product, book a course, request support, or contact the business directly from that page.

Example website demo: [Open the LearnAboutBees demo](#)

The demo shows one possible layout and customer journey. It is an example for discussion, not the final live website.

5.6 Quick Check Before Publishing a Page

- **Purpose:** Can a visitor understand what this page is about within a few seconds?
- **Main action:** Is there one clear button showing what the visitor should do next?
- **Information:** Are the price, date, location, format, and contact details correct where needed?
- **Trust:** Does the page include a useful review, real image, business detail, or other reason to feel confident?
- **Readability:** Are the headings clear and the paragraphs short enough to scan?
- **Phone check:** Does the page work without overlap, tiny text, difficult buttons, or sideways scrolling?
- **Links and forms:** Have all buttons, links, phone numbers, forms, bookings, and shop actions been tested?

5.7 Main Takeaway

The website already has a clear local business purpose and useful services. The next step is to make every page simpler and more direct.

Visitors should always be able to answer three questions: Where am I? What can I do here? What should I do next?

Clear menus, fewer competing buttons, organised learning information, visible trust details, and regular phone checks will make the website easier for customers to use and easier for the owner to maintain.

6. Social Media Self-Management Guide

This section offers a step-by-step guide for managing Aphrodite's Harvest and Learn About Bees independently on social media platforms. It aims to educate the business owner about their primary target audiences, how to leverage each platform and how to have a consistent approach to content that can help build brand awareness, educational engagement and professional credibility.

The information contained in this section is for a small business environment involving limited time and technical skills.

6.1 Social Media Purpose

There are three major objectives that social media should be used for:

- Increase awareness of Aphrodite's Harvest and Learn About Bees.
- Establish trust by providing educational and expert-based materials.
- Promote course inquiries, bookings and ongoing community Engagement

Aphrodite's Harvest is not a typical honey-selling brand that should be sold online. It should be connected to 3 areas in its digital presence: product and brand, education and learning and support and expertise.

This simply does not mean that social media can only be used to market products. It should also illustrate Aphrodite's experience, training and authority in beekeeping. Learn About Bees needs to be offered as a coherent but separate learning experience, emphasising learning, courses and structured knowledge.

6.2 Main Audience Groups

The target market can be segmented into three segments. The content should always be written for one of three specific audiences.

Audience 1 - Product and Lifestyle - Sarah

Those who prefer raw honey, natural products and local brands they can trust.

Best content for this group:

- Product photos and harvest stories
- Local Adelaide Identity and Brand Storytelling
- The key message of quality and authenticity.

Audience 2 - Learning and Education - Alex

Alex is curious about bees and sustainability, interested in learning beekeeping at a beginner level, and drawn to structured courses and accessible educational content.

Best content for this group:

- Bee facts and beginner tips
- Short Educational Posts
- Course Information
- Simple Explanations of beekeeping concepts

Audience 3 - Support and Specialist - Mark

Mark is an existing or aspiring beekeeper who needs practical, expert guidance. He is particularly interested in varroa management, seasonal hive advice, and one-on-one support.

Best content for this group:

- Hive Support Content
- Seasonal Advice
- Varroa-related Information
- One-on-one Support Information
- Expert practical guidance from a BSSA-accredited trainer

Ask before you post:

- For whom is this post intended?
- Who are they and what do they need?
- What's the most effective platform to reach them on?

6.3 Platform Use Guide

Each platform serves a different purpose. Do not copy and paste the same content across all three. Adapt the tone and format to match each platform's audience and behaviour.

Platform	Primary Role	Best Content Types
Instagram	Visual storytelling and brand engagement	Reels, carousels, product photos, hive visuals, short Learn About Bees teasers, stories

Facebook	Community, course promotion, and practical updates	Course announcements, events, longer educational captions, varroa updates, seasonal advice, support service information
LinkedIn	Professional authority and Learn About Bees positioning	Thought leadership, training and course highlights, industry commentary, biosecurity posts, Learn About Bees business page content

Week 1 - Start Here

The single most important action on each platform to do first:

Platform	Week 1 Action
Instagram	Film a short reel at the hive introducing yourself and your story. Update the bio with Adelaide keywords and BSSA credentials. Set up a Linktree link in bio.
Facebook	Fix the page category from Health/Beauty to Agricultural Service. Complete the About section with keywords. Configure the Book a Course CTA button.
LinkedIn	Create the Learn About Bees business page. Add BSSA accreditation and Varroa Program trainer credentials to your professional headline.

6.4 Content Pillars

All your social media content should fit into one of three content pillars. This keeps your presence balanced, purposeful, and consistent, rather than posting randomly.

Pillar	Focus Areas	Ready-to-Use Example
Pillar 1: Product & Brand	Raw honey, local identity, authenticity, brand story, trust-building visuals	See Example Post 1 in your Client Handover Pack, a ready-to-use honey product caption with hashtags and CTA.
Pillar 2: Education & Learning	Bee facts, beginner tips, course-related content, Learn About Bees promotion	See Example Post 3 in your Client Handover Pack, a bee fact carousel ready to publish on Instagram.

Pillar 3: Support & Expertise	Hive support, seasonal advice, varroa management, BSSA authority, specialist knowledge	See Example Post 4 in your Client Handover Pack, a varroa expert post ready to publish on Facebook.
--	--	---

Simple Weekly Balance: One possible weekly combination is:

- 1 Product and Brand Post.
- 1 Educational and Learning Post.
- 1 Support and Expertise Post

This prevents the use of only promotional material.

6.5 Posting Guidance

When planning content for social media, it should be done in a simple and realistic manner to keep social media manageable.

Recommended Weekly Rhythm

Platform	Recommended Frequency
Instagram	2–3 posts or reels per week, plus daily stories where possible
Facebook	2–3 posts per week, plus Facebook Events for every course date
LinkedIn	1–2 posts per week, thought leadership and Learn About Bees updates

Best Practice

- Maintain consistency of posting.
- Be focused on quality rather than volume.
- Reuse content where possible
- Keep captions clear and practical
- Provide a clear next step if applicable

Before Posting, Check

- ☐ Is this content relevant to the right audience?
- ☐ Does this address one of the 3 content pillars?
- ☐ Is the tone right for the platform?
- ☐ Is there a clear next step for the audience?

6.6 Performance Review

Review your social media once a month to understand what is working and what to adjust. Do not check metrics daily; this causes unnecessary stress. What matters is the monthly trend.

Platform	What to Track	Target
Instagram	Reach, reel views, saves, profile visits, link-in-bio clicks	Target: each reel reaching 3x your follower count. Target: 10+ saves per educational carousel.
Facebook	Post reach, shares, comments, event RSVPs, course enquiry messages	Target: 2x your follower count per original post. Track course DMs manually - most important metric.
LinkedIn	Impressions, reactions, profile views, connection growth, LAB page followers	Target: 300+ impressions per thought leadership post. Target: 150+ connections within 90 days.

Monthly Review Checklist (At the End of each Month)

- ☐ Check which posts had the best engagement - likes, saves, shares, comments
- ☐ Identify which content pillar performed best this month
- ☐ Note whether posting was consistent or irregular
- ☐ Record which platform generated the most course enquiries or link clicks
- ☐ Adjust next month's content based on results
- ☐ Update the 4-week content calendar for the next month

How to Know It Is Working

You do not need vanity metrics to know your social media is working. Here are five real signals:

- Content is being posted consistently every week
- Engagement gradually increases over time - even if slowly
- Educational and support-based content receives saves and shares
- More course enquiries or link clicks come directly from social media
- You feel confident managing content independently without needing help

6.7 Immediate Priorities - Start Here

These nine actions require no budget, no technical skills, and can all be completed in one afternoon. Do these before creating any new content.

#	Action	Time Needed
1	Fix Facebook page category to Agricultural Service	2 minutes
2	Update Instagram bio with Adelaide keywords and BSSA credentials	5 minutes
3	Add social media links to the aphroditesharvest.com.au website	10 minutes
4	Set up Linktree with 5 destinations: courses, shop, support, LAB, contact	15 minutes
5	Create the Learn About Bees LinkedIn business page	20 minutes
6	Post the next course date on all three platforms	30 minutes
7	Turn existing Google reviews into a testimonial carousel in Canva	45 minutes
8	Film first Instagram reel at the hive: introduce yourself and your story	30 minutes
9	Begin posting original content, not just sharing from other organisations	Ongoing

All nine actions are zero cost. They use tools you already have: your phone, Canva, and your existing platforms.

6.8 What to Avoid

These are the most common mistakes that reduce the effectiveness of social media for small businesses. Avoiding them will save you time and produce better results.

Avoid This	Do This Instead
Only uploading product photos	Mix all three content pillars every week: product, education, and expertise

Using the same caption on every platform	Adapt the tone. Instagram is visual and personal, Facebook is practical, LinkedIn is professional
Using too much jargon or technical terminology	Keep language simple and accessible; write the way you would explain something to a beginner
Sharing other organisations' content without adding your voice	Always add Aphrodite's personal perspective, your expertise is the value, not the share
Treating Learn About Bees the same as Aphrodite's Harvest	Keep the two brands clearly separate in tone, content, and platform positioning
Relying only on hashtags for reach	Build genuine community through replies, comments, and direct engagement with followers
Posting inconsistently then trying to catch up	Consistency at a lower volume beats irregular bursts: post twice a week every week

6.9 Tools You Will Need

All tools listed below are free. You do not need to purchase any software or subscriptions to manage your social media effectively.

Tool	What It Does	Cost & Access
Canva	Design posts, templates, and graphics	Free - canva.com
Meta Business Suite	Schedule Instagram and Facebook posts simultaneously	Free - business.facebook.com
LinkedIn native scheduler	Schedule LinkedIn posts - built into the platform	Free - built in
Linktree	Link in bio - routes to courses, shop, support, LAB, contact	Free - linktree
CapCut	Edit reels and auto-generate captions on video	Free - mobile app
Google Analytics	Track how many website visitors come from each social platform	Free - analytics.google.com

Google Business Profile	Maintain your 5.0 Google rating with monthly posts	Free - already set up
-------------------------	--	-----------------------

6.10 Where to Find Your Resources

This section of the toolkit works together with two additional deliverables. Use them in combination for the best results.

Deliverable	What It Contains
Social Media Strategy Document	The complete 25-section academic strategy - digital presence audit with real platform scores, theoretical framework, five-benchmark analysis, audience personas, content pillars, brand voice guide, KPI framework with 90-day targets, risk register, ethical considerations, and references.
Aphrodite's Harvest - Digital Transformation	The complete presentation document - digital presence audit scores, strategy overview, before and after platform transformation across Instagram, Facebook, LinkedIn and Linktree, example posts ready to publish, 90-day implementation roadmap, and client handover summary.
Client Handover Pack	The practical client toolkit - six reusable post templates with step-by-step Canva instructions, seven ready-to-publish example posts across Instagram, Facebook, and LinkedIn with full captions and hashtags, a monthly self-management checklist, and an analytics starter guide showing exactly what to track and when.

To get started immediately - open the Client Handover Pack, go to the Post Templates tab, and recreate Template 1 in Canva using the instructions provided. Then use the 4-week content calendar to plan your first month of posts. Everything you need is already written - you just need to add your own photos and publish.

6.11 Summary

This section provides everything you need to manage the full social media identity of Aphrodite's Harvest and Learn About Bees: practically, consistently, and independently.

By understanding your three audiences: Sarah, Alex, and Mark, knowing the distinct role of each platform, following the three content pillars, and using the tools and templates provided, you will be able to manage your social media presence with confidence.

The goal is not perfection. The goal is consistency. A post twice a week every week, built on your real expertise and genuine story, will do more for your business than an occasional burst of content followed by silence.

For ready-to-use templates, example posts, a monthly checklist, and a full analytics guide - refer to the Client Handover Pack which accompanies this toolkit.

7. SEO Self-Management Guide

SEO stands for Search Engine Optimisation. In plain terms, it means making your website easier for Google to find. When your SEO is good, people searching for honey or beekeeping courses in South Australia will find you without you paying for ads.

This chapter tells you what was set up, why it matters, and exactly what to do each month to keep it working. You do not need any technical background to follow this guide.

7.1 Why SEO Matters for Your Business

- More people find your honey and courses through Google - without paying for ads
- You build long-term visibility that keeps growing over time
- A stronger local presence across South Australia, especially Adelaide
- LearnAboutBees becomes a trusted destination for beekeeping education

7.2 Fix These Technical Issues First

These are the biggest barriers stopping Google from ranking your site. Fix these before anything else.

What to Fix	Why It Matters	How to Fix It
Slow loading speed (currently ~4.8 seconds)	People leave slow sites. Google also ranks them lower.	Shrink your images before uploading. Use a free tool: tinypng.com. Aim for under 200KB per image.
No sitemap	Google cannot find all your pages without one.	Install the free RankMath plugin on WordPress. It creates and submits your sitemap automatically.
Pages have no description in Google	Your pages look generic in search results - fewer people click them.	Write a short sentence for each page that describes what it is (see Section 7.4 for ready-to-use examples).
Images have no descriptions	Google cannot read images - it reads text descriptions instead.	Add a short description to every photo on your site (see Section 7.5 for examples).
No Google Analytics set up	You have no way of knowing how many people	Create a free Google Analytics account and connect it to your site via RankMath.

	visit your site or where they come from.	
--	--	--

7.3 What Your Customers Are Searching For

These are the words and phrases people type into Google when looking for products and services like yours. Using them naturally in your page content helps Google connect your site to those searches.

Use These on Your Main Pages

Search Phrase	How Many People Search This (AU)	Which Page to Use It On
raw honey South Australia	~500 per month	Homepage and Products page
buy local honey Adelaide	~260 per month	Products page
honey for sale Adelaide	~210 per month	Products page
beekeeping South Australia	~480 per month	LearnAboutBees page
Australian raw honey	~1,600 per month	Homepage

Use These in Blog Posts

Search Phrase	How Many People Search This (AU)	Blog Topic Idea
health benefits of raw honey	~2,400 per month	5 Health Benefits of Raw Honey
learn beekeeping online	~400 per month	How to Start Beekeeping in South Australia
local beekeeper near me	~720 per month	Why Buy Honey from a Local SA Beekeeper
Varroa mite management Australia	~390 per month	How to Manage Varroa in Your Hive
beekeeping courses Adelaide	~320 per month	What to Expect from a Beekeeping Course in Adelaide

7.4 What to Write on Each Page

Copy and use the examples below. These are ready to go - just update them in your website settings under each page's SEO section.

Aphrodite's Harvest@2026 | Adelaide University | Group S1-13

Page Titles and Descriptions for Google

The title is the blue link people see in Google. The description is the short summary underneath it. Both are set inside RankMath when you edit a page.

Page	Title for Google	Description for Google
Homepage	Raw Honey South Australia Aphrodite's Harvest	Shop premium raw honey from South Australia's trusted local apiary. Pure, unfiltered honey delivered across Australia.
Products	Buy Raw Honey Adelaide Aphrodite's Harvest	Order local raw honey online. Unprocessed, full-flavour honey from SA bees. Free delivery available.
About	About Us SA Beekeepers - Aphrodite's Harvest	Meet the team behind Aphrodite's Harvest - South Australia's passionate local apiary focused on sustainable beekeeping.
LearnAboutBees	Learn About Bees Free Beekeeping Resources SA	Free guides, courses, and beekeeping resources for South Australians - from beginner to advanced.
Blog	Beekeeping and Honey Blog Aphrodite's Harvest	Tips and guides from a South Australian beekeeper. Honey health benefits, hive care, Varroa management, and more.

The Main Heading on Each Page

Every page needs one main heading at the top. This is the biggest line of text a visitor sees first. It should include your main search phrase for that page.

Page	Main Heading to Use
Homepage	South Australia's Premium Raw Honey
Products	Buy Raw Honey in Adelaide
About	About Aphrodite's Harvest
LearnAboutBees	Learn Everything About Bees
Blog	Beekeeping and Honey Blog

7.5 Adding Descriptions to Your Images

Every image on your website needs a short text description. This is called alt text. Google reads this to understand what the image is about - it also helps people who use screen readers.

To add it: click on an image in WordPress, look for the 'Alt Text' field on the right side, and type your description.

Image	What NOT to Write	What to Write Instead
Jar of honey	image	Raw wildflower honey from South Australia in a glass jar
Beekeeper at hive	photo	Beekeeper inspecting a Langstroth hive at Aphrodite's Harvest apiary in Adelaide
Honeycomb	honeycomb1	Fresh unfiltered honeycomb from an Adelaide Hills beehive
Bees on a flower	DSC_0042	Honeybees collecting pollen from native South Australian wildflowers
Your logo	logo	Aphrodite's Harvest - South Australian raw honey

7.6 Setting Up Google Search Console

Google Search Console is a free tool from Google that shows you how your website is performing in search results. It tells you which keywords bring people to your site, and flags any problems Google finds.

How to Set It Up (Once Only)

1. Go to search.google.com/search-console and sign in with your Google account
2. Click 'Add Property' and type in aphroditesharvest.com.au
3. Follow the steps to verify ownership - the easiest way is through your domain host
4. Once verified, click 'Sitemaps' and enter: aphroditesharvest.com.au/sitemap.xml
5. Click Submit - Google will now start tracking your site

7.7 Setting Up Google My Business

Google My Business is what controls how your business appears on Google Maps and in local search results. It is free and one of the most effective things you can do for local visibility.

How to Set It Up (Once Only)

1. Go to business.google.com and sign in
2. Search for 'Aphrodite's Harvest' - if a listing exists, claim it. If not, create a new one.
3. Fill in everything: business name, address, phone number, website, and hours
4. Write a short business description and include the phrase 'raw honey South Australia'
5. Add at least 5 photos: your products, your hive, yourself
6. Verify your listing - Google will mail a postcard with a code to your address

What to Do Each Month

- Post 2 short updates - a new product, a blog post link, or a seasonal tip
- Reply to every new review, even just a quick thank you
- Check that your contact details and hours are still correct

7.8 Getting Other Websites to Link to Yours

When other websites link to yours, Google sees it as a vote of confidence. The more quality links you have, the more trustworthy your site appears. Here are the easiest places to start.

Who to Contact	Why It Helps	What to Ask For
SA Beekeepers Association (sabeekeepers.asn.au)	Direct industry connection - Google trusts this kind of link	Ask to be listed as a member with a link to your website
Primary Industries SA (pir.sa.gov.au)	A government site linking to you adds significant credibility	Submit your business to their producer directory
Local Adelaide food blogs	Their readers are exactly your audience	Offer to write a short guest post about raw honey or SA beekeeping
FoodSA or SA Tourism	High-visibility local directories	Apply to be listed as a local food producer

Simple Email to Send

Subject: Partnership opportunity - Aphrodite's Harvest
Hi [Name], I run Aphrodite's Harvest, a South Australian honey producer and beekeeping education platform at aphroditesharvest.com.au. I would love to explore being listed on your website or contributing a short article. Happy to return the favour on our blog. Thanks so much, [Your name]

7.9 Writing Blog Posts That Get Found

Publishing regular blog posts is one of the most effective ways to grow your Google presence over time. Each post targets a search phrase your customers are already using.

Two Ready-to-Publish Articles Are Included

Two complete blog articles have been written for you and are ready to copy into your website:

- Article 1: '5 Health Benefits of Raw Honey' - targets the phrase 'health benefits of raw honey' (~2,400 searches/month)
- Article 2: 'Beginner Beekeeping in South Australia' - targets 'beekeeping South Australia' (~480 searches/month)

Both articles are in the SEO Implementation Guide document provided with this toolkit.

How to Publish a Blog Post

1. Log in to your WordPress admin panel
2. Go to Posts > Add New
3. Paste the article content and add a title
4. Add a photo (with alt text - see Section 7.5)
5. In the RankMath box, set the title and description from the templates
6. Click Publish

7.10 What Order to Do Things In

Do not try to do everything at once. Follow this order - each phase builds on the one before it.

Phase	What to Do	When
1 Fix the basics	Compress images, install RankMath, submit your sitemap, set up Google Analytics and Google Search Console	Do this first - Weeks 1 to 2
2 Update your pages	Add the titles, descriptions, and headings from Section 7.4 to each page	Weeks 3 to 4
3 Start blogging	Publish the two ready-made articles. Then aim for one new post per month.	Week 5 onwards
4 Build local presence	Complete your Google My Business profile and start reaching out for links	Week 6 onwards

5 Keep going	Follow the monthly checklist. Check your Google Search Console once a month.	Every month ongoing
--------------	--	---------------------

7.11 Your Monthly Checklist

Set aside 2 hours once a month and work through this list. That is all it takes to keep your SEO healthy and growing.

Content

- Publish one new blog post using a search phrase from Section 7.3
- Check that your product descriptions are still accurate and up to date
- Share the new blog post on Instagram and Facebook with a link to the page

Website Health

- Log into Google Search Console and check if there are any errors to fix
- Make sure any new images have a description (alt text) before publishing
- Check that your website loads quickly on your phone - if it feels slow, compress your newest images

Google My Business

- Post 2 updates - a product photo, a seasonal tip, or a link to your latest blog post
- Reply to any new reviews

Monthly Progress Tracker

Fill this in at the end of each month using your Google Search Console data.

Month	Visitors from Google	Most Popular Page	Best Search Phrase	Notes
Month 1				
Month 2				
Month 3				
Month 4				
Month 5				

Month 6				
---------	--	--	--	--

7.12 Things to Avoid

Do Not Do This	Do This Instead
Repeating a search phrase over and over in the same paragraph	Use it once in the title and once or twice in the body - write naturally
Paying someone to add your link to random websites	Only get links from real, relevant websites that your customers would actually visit
Copying the same text onto multiple pages	Each page needs its own unique description and content
Ignoring errors shown in Google Search Console	Check once a month and fix anything flagged - errors stop Google from showing your pages
Publishing a very short page with almost no content	Aim for at least 300 words on product pages and 500 words on blog posts

7.13 Summary

You do not need to do everything at once. Start with the five fixes in Section 7.2, then update your page titles and descriptions using the templates in Section 7.4. After that, publish one blog post per month and spend a few minutes checking Google Search Console.

Small consistent actions each month will build your Google presence steadily over time. After six months of following the monthly checklist, check your progress tracker - you will see the difference.

8.0 Website Wireframe Recommendations

This design serves as a precise guide for developers and gives you a clear look at your future platform. Every single button, color choice, and section arrangement was custom-designed to match your farm's authentic identity and keep your visitors engaged.

8.1 Key Layout Features Built Into Your Design:

- **The Honey-Tone Color System:** The entire website uses a custom, natural color palette built from scratch. It pairs a warm, honey-evoking off-white (#FFF8E7) with a deeper cream background (#F5EDD0) to make the site look warm and organic. All headings use a deep, high-contrast amber-brown (#5C3D11) so they are easy to read for all age groups.
- **The Balanced Homepage Split:** At the very top, the design features a split introduction. It instantly makes your brand clear to a new visitor, letting them know they have arrived at a place where they can buy premium physical products and learn beekeeping under one roof.
- **Three clear Navigation Paths:** To eliminate confusion, the homepage features three distinct, cleanly divided service sections. Your visitors can easily choose between:
 1. **Services:** Direct access to your physical workshops and commercial offerings.
 2. **Courses:** A clean entry point into the Learn About Bees educational platform.
 3. **Specialised Support (Varroa Removal):** A prominent, dedicated section highlighting your unique industry expertise and Varroa parasite services, building immediate authority.
- **Built-In Social Proof and Trust:** Right below your services, a dedicated "Our Customers Trust Us!" section is built into the layout. It displays side-by-side customer reviews and local certifications, allowing new visitors to immediately see your long-standing real-world credibility the second they scroll down the page.
- **Clean, Actionable Component Library:** Every button, header, and text field has been structured as a clean visual block. The buttons use prominent shapes with high-contrast amber fills to make it completely obvious where a user needs to click to buy honey or enroll in a class, keeping the path to purchase incredibly simple.

8.2 Mobile Device View & Responsiveness:

Because many of your students and honey customers will access your website from the field or on the go using their smartphones, the interface has been fully optimised for mobile devices:

- **The Single-Column Stack:** On a smartphone screen, the three multi-column homepage blocks (Services, Courses, and Varroa Removal) automatically stack into a single, vertical

column. This lets mobile users scroll naturally with a thumb without having to zoom or squint.

- **Touch-Friendly Elements:** Buttons and interactive text boxes are dynamically resized to ensure they are large enough to tap easily on a mobile screen, preventing accidental clicks.
- **Simplified Navigation:** The clean layout avoids cluttered desktop menus, folding elements neatly into a clean layout so your phone screen stays tidy and easy to browse while working outdoors.

8.3 Direct Access Links:

- **Interactive Figma Layout & Color Workspace:** [FIGMA](#)
(Click this link to open the Figma file, where you can see the color swatches, button components, and the website skeletons.)
- **Full Website Wireframe & Design Specifications Document:** [Website Wireframe](#)
(Click this link to view the complete blueprint detailing exactly the color selections, sizing, responsiveness etc. in detail.)
