Semester 1

Review Date

12 June 2026

1. Project Overview

Aphrodite's Harvest is an Adelaide-based apiary operated by a second-generation beekeeper with over 30 years of experience. The business offers beekeeping courses, hive support, and raw honey products to a local and national audience. The client came to the capstone team with an established but under-optimised WordPress/Elementor website (aphroditesharvest.com.au) and a clear goal: improve organic search visibility to drive course enrolments and enquiries without paid advertising.

The team's deliverable is a Self-Management SEO Toolkit - a practical, plain-language resource enabling the client to manage and extend her own SEO strategy independently. My contribution centred on Chapter 7 (SEO Strategy & Implementation) and live technical implementation directly on the production WordPress site.

Project Scope (My Contribution)

Chapter 7 of the Self-Management Toolkit comprehensive SEO strategy guide
Live technical SEO implementation on aphroditesharvest.com.au (WordPress + Elementor)
Two publish-ready blog posts with SEO-optimised structure and featured images
RankMath installation, configuration, and meta optimisation across 5 core pages
Image alt-text audit and remediation across the site

2. Individual Contribution

The following table summarises every task I completed, its current status, and the evidence available for review during the viva.

Task / Deliverable	Status	Evidence / Demo Path
Chapter 7 - SEO Self-Management Toolkit	Complete	Word document — shareable via screen
RankMath Plugin - Install & Configure	Complete	Live WP admin dashboard
Meta titles & descriptions (5 pages)	Complete	RankMath - Edit Snippet per page
Homepage hero copy + keyword integration	Complete	Staging vs Live comparison
Image alt-text audit & remediation	Complete	Media Library + RankMath report
Blog Post 1 - 'Varroa Mite in Australia'	Complete	Published 9 June 2026
Blog Post 2 - 'What Makes Honey Raw?'	Complete	Published 9 June 2026
Callout box styling (Elementor)	Complete	Staging site - visual demo
Keyword research & target matrix	Complete	Chapter 7 appendix table

Task / Deliverable	Status	Evidence / Demo Path
Backlog / journal entries	Complete	Shared team journal

3. Technical Understanding

This section documents the technical decisions I made, the reasoning behind each, and how they align with professional SEO standards. I am prepared to walk through any of these live during the screen-share viva.

3.1 RankMath Installation & Configuration

RankMath was selected over Yoast SEO for its generous free-tier feature set (schema markup, redirects, keyword tracking for multiple keywords per post) and its native Elementor compatibility. Configuration steps:

- Installed via WordPress Plugin Directory; confirmed no conflicts with existing WPCode or SG Cache plugins
- Connected to Google Search Console (GSC) to enable live ranking data within WP admin
- Set general schema type to 'Local Business' with NAP details matching the Google Business Profile
- Enabled breadcrumbs to improve site structure signals to Googlebot
- Configured canonical tags site-wide to prevent duplicate-content penalties from URL variants

Why RankMath over Yoast?

Free tier includes: multiple focus keywords per post, 404 monitor, redirect manager, rich-snippet schema

Elementor-native: snippet editor appears in the Elementor sidebar - no context switching

Google Search Console integration: live CTR and impressions data without leaving WP admin

3.2 Meta Optimisation 5 Core Pages

Each page was audited against three criteria: (1) focus keyword present in title, (2) title under 60 characters, (3) meta description under 160 characters with a clear call-to-action. Where existing meta was missing or generic, I rewrote it.

Page	Focus Keyword	Title (chars)	Description (chars)	Change Made
Home	beekeeping courses Adelaide	57	154	Rewrote - was missing
About	Adelaide beekeeper	48	141	Rewrote - was generic

Page	Focus Keyword	Title (chars)	Description (chars)	Change Made
Courses	beekeeping courses SA	52	158	Rewrote - no keyword
Support	hive support Adelaide	49	147	Rewrote - too long
Shop	raw honey South Australia	55	152	Rewrote - missing CTA

3.3 Keyword Research & Targeting Strategy

Keyword selection used Google Keyword Planner, Ubersuggest (free tier), and manual Google autocomplete analysis. The strategy targets a mix of local-intent and informational keywords suited to the client's two main conversion goals: course enrolments and honey sales.

Keyword Cluster	Type	Monthly Volume (AU)	Competition	Target Page
beekeeping courses Adelaide	Transactional / Local	90–140	Low	Home / Courses
beekeeping courses South Australia	Transactional / Local	50–90	Low	Courses
raw honey South Australia	Transactional	140–200	Medium	Shop
varroa mite Australia 2025	Informational	300–500	Low	Blog Post 1
what is raw honey	Informational	800+	Medium	Blog Post 2
hive inspection service Adelaide	Local Service	30–60	Low	Support

Informational keywords were deliberately targeted via blog content to build topical authority — a strategy that supports ranking for transactional terms over time without requiring paid links.

3.4 Blog Content SEO Architecture

Both blog posts were written with a deliberate on-page SEO structure, not just keyword insertion. Key decisions:

- URL slug: short, keyword-rich, hyphenated - e.g. /varroa-mite-australia, /what-makes-honey-raw
- H1 contains primary keyword; H2s use secondary and LSI (Latent Semantic Indexing) variants
- Internal links added from blog posts back to Courses and Support pages to distribute link equity

- Featured images: custom-designed, compressed to <200 KB (WebP where Elementor supported), with descriptive alt text
- Reading level: targeted Grade 8–10 (Flesch–Kincaid) for broad accessibility
- Word count: 900–1,100 words - sufficient depth to signal topical authority without padding

Blog Post 1 - 'Varroa Mite in Australia: What Every Beekeeper Needs to Know in 2026'

Published: 9 June 2026 | Author: Nathan | URL: /varroa-mite-australia

Primary keyword: 'varroa mite Australia 2026'

Secondary: 'varroa destructor beekeeping', 'varroa mite treatment Australia'

Internal links: Courses page (hive management course), Support page (inspection service)

Schema: BlogPosting with author, datePublished, keywords

Blog Post 2 - 'What Makes Honey Raw? A Guide to Unprocessed South Australian Honey'

Published: 9 June 2026 | Author: Nathan | URL: /what-makes-honey-raw

Primary keyword: 'what is raw honey'

Secondary: 'raw honey South Australia', 'unprocessed honey benefits'

Internal links: Shop page (buy raw honey), About page (Aphrodite's story)

Schema: BlogPosting + FAQPage block for 'Is raw honey better than regular honey?'

3.5 Image Alt-Text Audit

A full audit of the WordPress Media Library identified 23 images with missing or non-descriptive alt text. All were remediated prior to the product review.

- Alt text written to be descriptive and keyword-adjacent where naturally appropriate
- Avoided keyword stuffing - followed Google's guideline of describing the image for a screen reader first
- Decorative images (e.g. background overlays) given empty alt="" to hide from assistive technology
- File names also renamed to be descriptive before upload (e.g. adelaide-beekeeping-course.jpg not IMG_0047.jpg)

3.6 Chapter 7 - Self-Management SEO Toolkit

Chapter 7 is the primary written deliverable. It is structured as a plain-language, action-oriented guide for a non-technical small business owner managing their own SEO. Key design decisions:

- Plain language throughout - no unexplained jargon; technical terms defined on first use
- Callout boxes used to flag action items vs. explanatory background content
- Monthly SEO maintenance checklist - allows client to self-audit without consultant dependency
- Includes a keyword tracking template (Google Sheets) pre-populated with the target keyword matrix

- References Australian-specific SEO context: Google AU SERPs, local business schema, .com.au domain signals
- APA 7 citations for all referenced tools and studies

4. Product Quality & Client Alignment

4.1 Live Site vs. Staging - What Changed

The staging site (staging2.aphroditesharvest.com.au) served as a safe environment to test Elementor changes before pushing to production. A side-by-side comparison demonstrates the scope of implementation:

Element	Before (staging2 / original)	After (live site)
Homepage hero H1	Plain 'Adelaide Beekeeping Training and Support'	Same text + keyword-rich subtitle added
Homepage layout	Text only in hero section	Text + 'Who is Aphrodite?' section with photo
Blog section	Not present on homepage	Recent Blogs feed - 2 posts displayed
Navigation	Home, About, Events, Courses, Support, Shop, Contact	+ 'Blogs' menu item added
Meta titles	Default WordPress page titles	Custom keyword-optimised titles all 5 pages
Footer copyright	Copyright © 2026 Aphrodite's Harvest	Same - confirmed accurate
RankMath	Not installed	Installed, configured, GSC connected

4.2 Client Requirements Alignment

All deliverables were scoped and confirmed against the client's stated goals during the initial brief and subsequent check-ins:

- Goal: increase organic search visibility - addressed via keyword strategy, meta optimisation, and blog content
- Goal: self-manage SEO after project end - addressed via Chapter 7 Toolkit with step-by-step guides
- Goal: no technical changes client can't maintain - all implementations use RankMath GUI; no custom code
- Goal: professional, trust-building online presence - blog posts position Aphrodite as a subject-matter expert

4.3 Professional Standards

The work completed meets professional standards in the following ways:

- SEO implementation follows Google Search Central guidelines — no black-hat techniques
- Blog content is original, factually accurate, and cites reputable sources (PIRSA, DPI NSW, BSSA)
- Chapter 7 follows accessible plain-language writing standards (AGLS / plain English guidelines)
- All tools used are industry-standard: RankMath, Google Search Console, Google Keyword Planner
- Version tracking: all changes recorded in the team's shared backlog/journal

5. Supporting Documentation

The following documentation supports and substantiates the work completed:

5.1 Chapter 7 — Self-Management SEO Toolkit

- Full Word document — shared during screen-share
- Includes methodology, keyword matrix, monthly checklist, and all referenced literature
- APA 7 in-text citations and reference list

5.2 Backlog / Journal

- All tasks logged with dates, decisions, and outcomes in the shared team journal
- Cross-references with this document for traceability

5.3 Live Site Evidence

- aphroditesharvest.com.au — live implementation viewable in browser
- RankMath dashboard — meta data, schema, GSC connection demonstrable in WP admin
- Google Search Console — indexing status, sitemap submission confirmable

5.4 Research & Methodology

- Keyword research methodology: Google Keyword Planner + Ubersuggest + manual autocomplete
- Competitor analysis: reviewed top 5 SA beekeeping sites for content gaps
- Content brief process: each blog post had a keyword brief before writing began
- Sources cited: Google Search Central, Moz, Search Engine Journal, PIRSA, BSSA

6. Viva Preparation

During the screen-share review, I will demonstrate the following in order. Each item is ready to display.

#	What I Will Show	Where / How
1	Live homepage — staging vs production comparison	Two browser tabs, aphroditesharvest.com.au
2	RankMath dashboard — site-wide SEO score	WP Admin → RankMath → Dashboard
3	Meta titles/descriptions — 5 pages	WP Admin → Pages → Edit → RankMath snippet
4	Blog posts — on-page structure	Live site → Blog → each post
5	Image alt text — Media Library	WP Admin → Media → filter by 'no alt text'
6	Chapter 7 — Toolkit walkthrough	Word document screen share
7	Keyword matrix & monthly checklist	Chapter 7 appendix, screen share
8	Google Search Console — sitemap	GSC → Sitemaps (if accessible day-of)

7. Reflection & CLO Alignment

CLO	How My Work Addresses It
CLO1 - Domain knowledge & project mgmt	Applied SEO domain knowledge across technical implementation and written toolkit; managed own backlog
CLO2 - Project team contribution	Contributed Chapter 7, all live technical SEO, and both blog posts as individually owned deliverables
CLO3 - Justify deliverables & communicate value	Chapter 7 frames every recommendation with a rationale for a non-technical client audience
CLO4 - Reflect on key learnings	Gained practical experience with RankMath, Elementor, GSC, and the gap between SEO theory and client-ready implementation
CLO5 - Ethical & cultural aspects	Ensured all content is factually accurate, accessible, and respects the client's brand voice and community standing
CLO6 - Product documentation & handover	Chapter 7 Toolkit is designed as a self-sufficient handover resource; client can manage SEO independently post-project
