

Aphrodite's Harvest and Learn About Bees' Social Media Strategy

This document presents a structured social media strategy for Aphrodite's Harvest and Learn About Bees. The main purpose of the strategy is to improve the client's digital presence by turning existing real-world credibility into clear, consistent, and practical online communication.

The central idea of the strategy is that Aphrodite's Harvest is not simply a honey business with a social media problem. It is an undercommunicated expert brand. Aphrodite already has strong offline authority through long-term beekeeping experience, specialist knowledge, a strong Google reputation, and educational credibility. However, this authority is not currently reflected clearly across Instagram, Facebook, and LinkedIn. Therefore, the strategy focuses on closing the gap between offline credibility and online visibility.

1. Digital Presence Audit

The strategy begins with a current-state audit of Aphrodite's Harvest across Instagram, Facebook, and LinkedIn. The audit identifies that the business has very limited social media activity compared to its real-world expertise and reputation.

Instagram has very low activity (2 posts, 37 followers, 50 following, no reels, no highlights), with only a small number of posts and limited follower growth. Facebook has slightly more activity (85 followers, 19 following, ~25 posts since September 2024, category listed as "Health/Beauty") but lacks strong positioning, original content, and complete profile optimisation. LinkedIn is the weakest platform (Personal profile only, 1 connection, zero posts, no business page), with no clear business presence or professional content. Overall, the audit shows that Aphrodite's Harvest has strong offline trust (Google rating: 5.0 stars), but weak digital alignment.

The key issue identified is that the brand's credibility is not being communicated online. Important strengths such as beekeeping experience, BSSA accreditation, varroa knowledge, training capability, and customer trust are not visible enough across the social platforms.

Digital Presence Scorecard - Current State Audit

As of May 2026, Evidence-based assessment of Aphrodite's Harvest across all active social platforms

Key Finding: Aphrodite's Harvest has a strong real-world reputation (5.0 Google rating, BSSA accreditation, 30+ years experience) but almost no active social media presence. The gap between offline authority and online visibility is the central problem this strategy addresses.

2. Theoretical Framework

The document also includes a theoretical framework to support the strategy. This ensures the recommendations are not just random content ideas but are based on recognised marketing and communication concepts.

The first framework is the content marketing funnel: awareness, consideration, and conversion. Instagram is mainly used for awareness through reels, carousels, and visual content. Facebook supports consideration through community posts, course announcements, and educational updates. LinkedIn supports authority and professional credibility. Conversion is achieved through clear calls to action, such as booking a course, buying honey, or requesting support.

The second framework is social proof theory (Cialdini, 1984). Aphrodite's Harvest already has strong trust signals, such as a 5-star Google rating and positive testimonials. The strategy recommends turning this existing trust into visible social media content, such as testimonial carousels and course feedback posts.

The third framework is platform-audience fit (Tuten & Solomon, 2017). Each platform has a different purpose and audience behaviour, so the same content should not be posted identically across Instagram, Facebook, and LinkedIn.

3. Benchmark Comparison Analysis

The strategy includes a benchmark comparison of five relevant organisations: Beechworth Honey, Flow Hive, The House of Honey, When Bee Foundation, and Bee One Third.

These benchmarks were selected because each one reflects a different part of Aphrodite's Harvest's model. Beechworth Honey shows how honey products can be combined with education and brand trust. Flow Hive demonstrates strong tutorial and community-based content. The House of Honey shows how workshops and visitor experiences can be promoted. When Bee Foundation demonstrates authority and awareness-building around bee education. Bee One Third shows how sustainability and community impact can be communicated.

The purpose of the benchmark section is not to copy these organisations, but to identify what Aphrodite's Harvest can learn and adapt. The main finding is that successful brands do not only post products. They combine education, trust, storytelling, community value, and clear calls to action.

EVALUATION CRITERIA	BENCHMARK 01 Beechworth Honey Honey brand trust + education	BENCHMARK 02 Flow Hive Tutorials + community content	BENCHMARK 03 The House of Honey Workshops + customer experience	BENCHMARK 04 When Bee Foundation Authority + bee awareness education	BENCHMARK 05 Bee One Third Community impact + sustainability	BENCHMARK 06 Aphrodite's Harvest Current state May 2025
	Primary Model What the business does Premium honey brand with integrated visitor education and in-store experience	Product brand with a large tutorial and community content ecosystem	Retail honey combined with hands-on workshops, tours, and immersive experiences	Bee health NGO focused on public education, research, and policy advocacy	Urban beekeeping social enterprise focused on community impact and sustainability	Beekeeping training, raw honey retail, hive support, and Learn About Bees educational platform
	Platform Presence Where they are active IG FB	IG FB YT	IG FB	IG FB LI	IG FB LI	IG FB LI All underdeveloped
	Posting Frequency Approximate per week 4–5× per week across Instagram and Facebook	Daily across all platforms — high volume operation	3–4× per week — event and season driven	4–5× per week — consistent schedule maintained	3–4× per week — quality over volume approach	Irregular — under 2× per month across all platforms
	Content Mix Types of content published Product storytelling, bee education, behind-the-scenes, heritage narrative, seasonal content	Hive tutorials, beginner guides, expert Q&A, community stories, seasonal advice	Product photography, workshop promos, school programs, seasonal content, event recaps	Shareable bee facts, research updates, community awareness, seasonal pollinator content	Urban hive stories, community partner content, sustainability messaging, impact metrics	Introduction post, varroa course promo, shared third-party content from When Bee
	Key Strength What they do best STRENGTH Fuses brand heritage with educational value — every post teaches and sells simultaneously	STRENGTH Each platform has a distinct role. Content is never duplicated verbatim across channels.	STRENGTH Demonstrates that retail and education reinforce each other — not competing decisions	STRENGTH Very high shareability. Strong community identity — followers belong to a cause, not just a page	STRENGTH LinkedIn is notably strong — positions beekeeping as a professional and impactful field	STRENGTH Strongest real-world credentials of any entity in this set — BSSA, 30+ years, 5.0 Google, Varroa Program trainer
	Key Weakness Primary limitation WEAKNESS Heavily reliant on physical visitor venue — not directly replicable for a sole operator	WEAKNESS Global scale means no local relevance — AH's SA-specific context cannot be replicated	WEAKNESS Events-heavy model assumes a permanent physical venue — challenging for a sole operator	WEAKNESS Not commercially focused — shareability alone will not drive course bookings or honey sales	WEAKNESS Urban social enterprise focus differs from AH's specialist training model	WEAKNESS Exceptional credentials not visible online — social presence does not reflect offline authority at any level
	Strategic Takeaway What AH should adopt TAKEAWAY Blend product and education in every post — a honey photo should carry a bee insight and an education post should connect to AH's products or courses.	TAKEAWAY Adopt the series and module content structure for LAB. Local SA identity and in-person access are genuine competitive advantages Flow Hive cannot replicate.	TAKEAWAY Behind-the-scenes course content — students in bee suits, hands-on hive frames — is the most effective visual content type for this model.	TAKEAWAY AH currently shares When Bee content — this drives their audience, not AH's. AH must create its own shareable educational content to capture that engagement.	TAKEAWAY AH's sustainability and environmental story — bee population health, varroa as ecological responsibility — is underutilised and directly attracts the LAB audience.	OPPORTUNITY AH has more genuine authority than any benchmark here. The gap between offline reputation and online visibility is the largest — and therefore the largest opportunity.

4. Audience and Platform Matrix

The strategy identifies three key audience personas: Sarah, Alex, and Mark.

Sarah represents the product customer. She is interested in raw honey, health, local origin, and authentic producer stories. Instagram and Facebook are the most suitable platforms for reaching her through product photography, harvest stories, and local brand content.

Alex represents the beginner learner. He or she is interested in bees, sustainability, and learning about beekeeping but may not yet have experience. Instagram and LinkedIn are suitable

platforms for reaching this audience through beginner bee facts, educational carousels, reels, and Learn About Bees course content.

Mark represents the support-seeking beekeeper. He is more interested in practical beekeeping support, varroa management, hive health, and expert advice. Facebook and LinkedIn are the most suitable platforms for reaching him through seasonal checklists, varroa updates, Q&A content, and one-on-one support promotion.

This audience mapping ensures that content is targeted and purposeful rather than generic.

Audience × Platform Matrix						
Three personas mapped to platform, content type, tone, CTA, and what to avoid						
Persona	Profile	Platform	Content That Reaches Them	Tone	Call To Action	Avoid
Alex Beginner Learner Age 25–45, Sustainability-Focused	Interested in bee-keeping, but not yet a beekeeper. Motivated by sustainability and environmental interest. Desires easy and non-threatening access points.	Instagram, Linked In	Beginner bee facts, "did you know" carousels, hive life reels, pollination and sustainability content, course teasers	Friendly, curious. "You don't need experience to start." Bees aren't frightening, they're fascinating.	Learn more → book a course / Learn About Bees	Assuming prior knowledge, advanced varroa without beginner context
Sarah Product Customer Age 35–50, Health-Conscious	Purchases raw honey for health and local-origin. Appreciates genuine stories and personal knowledge of the producer. Price-secondary to quality.	Instagram, Facebook	Product photography, harvest process, local Adelaide identity, seasonal honey varieties, producer story content	Warm, personal, authentic First-person. "This is a creation by my bees."	Shop → website / distributor	Heavy technical content, excessive course jargon promotion,
Mark Support-Seeking Beekeeper Age 40–60, Existing Beekeeper	Has hives or is planning to. Specific practical requirements relating to Varroa and hive health. Respects and values and trusts the expertise over personality. Looks for the most authentic expert.	Facebook, Linked In	Expert, direct, evidence-based: area management posts, seasonal checklists, one-on-one support promos, PIRSA biosecurity updates, Q&A content.	Aphrodite as trusted specialist, not influencer.	Book one-on-one / varroa course	Too casual, lifestyle, beginner framing

5. Platform Purpose Matrix

The strategy defines a clear role for each platform.

Instagram is positioned as the platform for visual storytelling, brand visibility, education reach, reels, carousels, stories, and product photography. It is mainly used to reach Sarah and Alex.

Facebook is positioned as the platform for local community, course promotion, events, and practical updates. It is especially useful for Mark and local customers.

LinkedIn is positioned as the platform for professional authority, Learn About Bees positioning, B2B credibility, and thought leadership. It is important for building trust with professionals, organisations, schools, councils, and sustainability-related audiences.

The strategy clearly states that content should not be copied and pasted across all three platforms. Instead, the same idea should be adapted to match the platform's purpose and audience.

		
Instagram Brand visibility and education reach	Facebook Community and course promotion	LinkedIn Authority and Learn About Bees positioning
Strategic role Visual storytelling and brand personality	Strategic role Local community building and practical updates	Strategic role Expert positioning and B2B reach
Primary audience Sarah + Alex	Primary audience Mark + Sarah (local)	Primary audience Alex (professionals) + Mark + corporates
Best formats Reels, carousels, stories, product photography	Best formats Course posts, educational text, events, tips	Best formats Thought leadership, credentials, industry posts
Tone Warm, visual, approachable, authentic	Tone Informative, community-minded, practical	Tone Professional, authoritative, specialist-led
Cadence 3-4x feed per week + daily stories	Cadence 3-4x per week	Cadence 1-2x per week
KPI Follower growth, saves, link-in-bio clicks	KPI Event RSVPs, course DMs, shares	KPI Views, connections, inbound DM enquiries
Current state 2 posts, 37 followers — needs rebuild	Current state 85 followers, miscategorised, shared content	Current state Personal only, 1 connection, zero posts
Week 1 action Film a reel at the hive this week	Week 1 action Fix category + post next course date	Week 1 action Create Learn About Bees business page

6. Content Pillar Matrix

The content strategy is organised around three main content pillars.

The first pillar is Product and Brand. This focuses on raw honey, local identity, product quality, provenance, and Aphrodite's personal story. It positions Aphrodite's Harvest as a warm, trusted, local honey brand.

The second pillar is Education and Learning. This supports Learn About Bees through bee facts, beginner content, course promotion, sustainability education, and accessible learning material. It helps attract people who are curious about bees or interested in beekeeping.

The third pillar is Support and Expertise. This focuses on hive support, varroa management, seasonal advice, BSSA accreditation, and specialist beekeeping knowledge. It positions Aphrodite as an expert and trusted support provider, not just a product seller.

Together, these pillars ensure the content is balanced among product promotion, education, and expert support.

 Pillar 1: Product & Brand Raw honey, local identity, product quality, provenance, and authentic storytelling. Positions AH as a premium local producer with a personal story behind every jar. Platforms Instagram (primary), Facebook (secondary) Formats Product photos, harvest reels, stories, seasonal posts Frequency 2x Instagram, 1x Facebook per week Tone Warm, personal — Aphrodite's story is the brand Example "This honey took 30 years to perfect. Never heated. Never filtered." CTA Shop link in bio / find a distributor KPI Link clicks, product DMs, post saves Persona Sarah	 Pillar 2: Education & Learning Bee facts, beginner content, Learn About Bees promotion, sustainability. Supports LAB as a credible educational brand and attracts the next generation of beekeepers. Platforms Instagram (reels), LinkedIn (authority), Facebook (events) Formats Educational carousels, "did you know" reels, course teasers Frequency 2x per week across all platforms Tone Friendly, curious — bees are not intimidating Example "A honeybee visits 1500 flowers for one teaspoon of honey. Swipe to learn 5 more facts →" CTA Register for a course / Visit Learn About Bees KPI Course page visits, saves, shares, poll engagement Persona Alex	 Pillar 3: Support & Expertise Hive support, varroa management, seasonal advice, BSSA accreditation. Positions Aphrodite as the most credible specialist beekeeper in South Australia. Platforms Facebook (primary), LinkedIn (authority), Instagram stories Formats Varroa tips, seasonal checklists, Q&A, thought leadership Frequency 1-2x Facebook, 1x LinkedIn per week Tone Expert, direct, trustworthy — specialist, not amateur Example "Varroa is in SA. Here's your practical checklist from a National Varroa Program trainer." CTA Book one-on-one support / varroa course KPI Support enquiries, post saves, DMs Persona Mark
--	---	--

7. Brand Voice Guide

The document includes a brand voice guide for both Aphrodite's Harvest and Learn About Bees.

Aphrodite's Harvest should sound warm, authentic, local, personal, and knowledgeable. The tone should reflect Aphrodite's own story and experience as a beekeeper.

Learn About Bees should sound clear, structured, educational, professional, and welcoming. Its tone should support learning and make beginners feel comfortable.

This section helps ensure that captions, comments, course posts, educational content, and customer responses remain consistent across the platforms.

Aphrodite's Harvest			Learn About Bees		
The mother brand — product, personality, and specialist support			The educational platform — structured, accessible, course-led		
Warm Authentic Community-focused Trustworthy Personal Knowledgeable			Clear Structured Educational Expert-led Welcoming Encouraging		
✓ DO SAY "I've been keeping bees for over 30 years..." "My bees made this — from our Adelaide and Hills hives." "This season's harvest is especially golden." "Here's what I've learned about varroa..." "As a second-generation beekeeper..."			✓ DO SAY "You don't need experience to start learning." "In this module, you'll learn how to..." "Our courses are designed for all levels." "Did you know that varroa..." "Led by BSSA-accredited trainer Aphrodite."		
✗ DON'T SAY "Our premium artisanal product..." "Click here to purchase now!" "Studies show that honey contains..." "We are pleased to announce..." Corporate-speak or third-person brand language			✗ DON'T SAY Technical jargon without plain-English explanation "You must know this before you start" Identical language to AH product posts "Our platform offers..." (too corporate) Overly casual tone inconsistent with education authority		
SITUATION	APHRODITE'S HARVEST TONE	LEARN ABOUT BEES TONE			
Introducing a course	"I'm running a hands-on varroa workshop this Saturday — here's what we'll cover."	"Our Getting to Grips with Varroa course covers monitoring, identification, and treatment options for all skill levels."			
Sharing a bee fact	"Did you know my bees can fly up to 3km to find pollen? Every jar tells that story."	"Honeybees have a foraging range of up to 5km. Understanding this helps beekeepers site hives effectively — Module 2 covers this."			
Responding to a comment	"Thanks so much! 🐝 Feel free to DM me if you have any questions."	"Great question! Our Introduction to Beekeeping course addresses this directly — link in bio."			
Varroa content	"Varroa is serious and I want every SA beekeeper to be prepared. Here's what I'd check first..."	"Varroa management is a core skill for all modern beekeepers. Our dedicated course covers monitoring protocols and treatment options."			

8. Brand Split: Aphrodite's Harvest vs Learn About Bees

The strategy separates Aphrodite's Harvest and Learn About Bees into two connected but distinct identities.

Aphrodite's Harvest is the main brand. It focuses on honey, local identity, Aphrodite's personal story, beekeeping expertise, and specialist support.

Learn About Bees is the educational platform. It focuses on courses, structured learning, beginner-friendly content, bee education, and professional credibility.

This distinction is important because the two brands serve different but connected purposes. If they are not separated clearly, the audience may become confused about what each brand offers.

Aphrodite's Harvest	Learn About Bees
The mother brand — product, personality, specialist support	The educational platform — structured, accessible, course-led
BRAND IDENTITY Adelaide's trusted beekeeper — warm, expert, local, personal, authentic	BRAND IDENTITY SA's structured beekeeping education platform — professional, welcoming, knowledge-led
PRIMARY AUDIENCE Sarah (honey buyers), Mark (support-seeking beekeepers), local Adelaide community	PRIMARY AUDIENCE Alex (beginners), schools, sustainability communities, corporate CSR partners
PLATFORM PRIORITY Instagram → Facebook → LinkedIn	PLATFORM PRIORITY LinkedIn → Instagram → Facebook
CONTENT FOCUS Raw honey, hive inspections, training, varroa expertise, Aphrodite's 30-year story	CONTENT FOCUS Course modules, bee education series, beginner guides, varroa previews, pollination content
VOICE Personal, first-person, warm authority	VOICE Educational, encouraging, clear expert leadership
VISUAL STYLE Warm honey tones, real photography, Aphrodite's face visible and central	VISUAL STYLE Cleaner, more structured — infographic-style, educational aesthetic, consistent palette
KEY DIFFERENTIATOR BSSA + second-generation + SA-local + National Varroa Program — unreplicable combination	KEY DIFFERENTIATOR Only SA-based structured beekeeping education connected to an active accredited beekeeper — not just theory
CROSS-PROMOTION Tags LAB for every course post; links to Mondees Bees for partner content	CROSS-PROMOTION Always links back to AH for honey and support; positions Aphrodite as the expert behind the platform

9. SEO and Social Media Alignment

The strategy also explains how social media can support website visibility and local search discoverability.

This includes improving platform bios, using relevant keywords, adding social links to the website, improving Google Business Profile activity, using consistent hashtags, and making sure all platforms direct users back to the correct website or course page.

The goal is to make social media part of the wider digital ecosystem, rather than treating it as a separate activity.

How social activity supports search visibility	Priority SEO actions for AH
→ Brand name searches: People who see AH on Instagram then search for it on Google — increased search volume signals relevance and improves organic ranking.	→ Instagram bio keyword update: Add "Adelaide beekeeping training" to bio — the exact term people search for. Currently missing.
→ Content backlinks: Shareable educational posts (varroa guides, bee fact carousels) can result in other websites linking to aphroditesharvest.com.au — the strongest SEO signal available.	→ Facebook About section: Currently incomplete. Fill all fields with keyword-rich descriptions — Facebook pages rank in Google for local business queries.
→ Google Business Profile: AH's 5.0 rating is a local SEO asset. Linking all social platforms and maintaining the profile consistently reinforces local search ranking.	→ Social links on website: The live website has no social links. Adding them takes minutes and tells Google the brand has an active digital presence.
→ Consistent NAP data: Name, Address, Phone must be identical across website, Facebook, Instagram, LinkedIn, and Google Business. Any inconsistency suppresses local SEO.	→ Consistent hashtag strategy: Use #AdelaideBeekeeping, #SouthAustraliaHoney, #SABees consistently. These function as social search filters extending organic reach without paid advertising.
→ Video captions: Reels with captions containing keywords (beekeeping, varroa, Adelaide, raw honey) are indexed by Google — extending SEO reach beyond the platform.	→ LinkedIn URL customisation: Update to include "aphroditesharvest" or "aphrodite-beekeeper-SA" — a small change with direct SEO benefit.

10. Conversion Path by Platform

The document maps the desired user journey for each platform.

On Instagram, the journey is from discovery to profile visit, then to following, engagement, and link-in-bio clicks.

On Facebook, the journey is from local discovery to page visit, event interest, direct message enquiry, and course booking.

On LinkedIn, the journey is from professional impression to credibility building, connection, enquiry, and possible partnership or institutional opportunity.

This section makes the strategy outcome-focused. The goal is not only to post content, but to guide users toward real actions.

11. KPI Framework

The strategy includes a KPI framework to measure whether the social media activity is working.

Instagram KPIs include follower growth, reel reach, post saves, story engagement, and link-in-bio clicks.

Facebook KPIs include follower growth, post reach, course enquiry messages, event RSVPs, and review growth.

LinkedIn KPIs include profile views, connection growth, post impressions, page followers, and professional enquiries.

These KPIs help connect social media performance to actual business outcomes.

Instagram KPIs	Facebook KPIs	LinkedIn KPIs
Follower growth rate Baseline: 37 followers Target: +50/month months 1–3; +100/month by month 6 <i>Tracked weekly via Instagram Insights</i>	Page follower growth Baseline: 85 followers Target: 200 followers within 90 days <i>Achievable with consistent posting and local sharing</i>	Profile and page views Baseline: Minimal — 1 connection Target: 50+ views/month within 60 days <i>Establishing presence from near-zero baseline</i>
Post save rate Baseline: Unknown (too few posts) Target: 10+ saves per educational carousel <i>Saves = content worth returning to = authority signal</i>	Organic post reach Baseline: Limited — mostly shared content Target: 2x follower count per original post <i>Original expert content outperforms shared content significantly</i>	Connection growth Baseline: 1 connection Target: 150 connections in 90 days <i>Connect with SA agriculture, education, sustainability</i>
Reel reach Baseline: No reels posted Target: 3+ follower count per reel in first 48hrs <i>Reels reach non-followers — primary growth engine</i>	Course enquiry messages Baseline: Unknown Target: 3–5 DMs per course announcement <i>Direct business value — tracked manually in Facebook inbox</i>	Post impressions Baseline: Zero posts Target: 300+ impressions per thought leadership post <i>LinkedIn rewards niche expert commentary strongly</i>
Link-in-bio clicks Baseline: Not tracked Target: 20+ clicks/month to courses or shop <i>Via Linktree or website analytics — direct revenue signal</i>	Event RSVPs Baseline: No events created Target: 15+ RSVPs per Facebook Event <i>Facebook Events drives strong local discovery</i>	Inbound enquiries Baseline: None Target: 1–2 professional DMs/month by month 3 <i>B2B leads for LAB — schools, councils, corporates</i>
Story view rate Baseline: No stories Target: 30%+ of followers viewing stories <i>High rate = active, engaged audience quality</i>	Review count Baseline: 1 Facebook review Target: 5+ reviews within 6 months <i>Ask course attendees directly after sessions</i>	LAB page followers Baseline: Page doesn't exist yet Target: 75 followers within 60 days of page creation <i>Page creation is a Week 1 action — not optional</i>

12. Baseline vs Target Comparison

The document compares the current baseline with future targets over 30 days, 90 days, and 6 months.

This includes targets for follower growth, posting consistency, platform setup, Facebook category correction, LinkedIn presence, Learn About Bees visibility, social links, course enquiries, SEO keywords, and brand voice consistency.

This section helps define what progress should look like over time.

13. Four-Week Content Calendar

The strategy includes a practical four-week content calendar across Instagram, Facebook, and LinkedIn.

Week 1 focuses on establishing presence and introducing the brand.

Week 2 focuses on education and bee awareness.

Week 3 focuses on course promotion and social proof.

Week 4 focuses on community, seasonal content, and momentum.

Week 1 — Establish presence and introduce the brand

Mon	INSTAGRAM	Reel at the hive. Aphrodite direct to camera. "30 years, one passion. Here's why I became a beekeeper." 30–45 seconds, personal, warm. CTA: Link in bio — courses page. Est. creation time: 20 mins	Product & Brand
Tue	FACEBOOK	Fix page category + fill About section + configure CTA button. Then post proper welcome post with services list, contact, and course link. Pin to top. One-time setup. Est. time: 45 mins total	Product & Brand
Wed	LINKEDIN	Create Learn About Bees business page. First post: Full credentials — BSSA accredited, 2nd generation, 30+ years, National Varroa Management Program trainer, SA-based. Tags: #Beekeeping #SouthAustralia #Education. Est. time: 30 mins	Support & Expertise
Fri	INSTAGRAM	Product photo — raw honey jar, natural light, honey drizzle. "Never heated. Never filtered. Pure SA honey from our Adelaide and Hills hives." 500g \$15 / 3kg \$90. CTA: Shop link in bio. #RawHoney #Adelaide #LocalHoney	Product & Brand

Week 2 — Education and Bee Awareness

Mon	INSTAGRAM	Carousel — "5 things you didn't know about honeybees 🐝." Branded, shareable graphics. Slide 5: "Learn more — beginner courses in Adelaide, link in bio." Car: Save this post. Tag a friend. Est. creation: 45 mins in Canva	Education & Learning
Tue	FACEBOOK	Original post by Aphrodite: "What is Varroa and why should every SA beekeeper care?" Plain English, written in Aphrodite's voice. Not a share. Link to varroa course at bottom. Est. writing time: 20 mins. This establishes original expert content.	Support & Expertise
Thu	INSTAGRAM	Reel — "What happens inside a hive in winter?" 30 seconds, filmed at hive, Aphrodite narrating. Beginner-friendly. No jargon. Caption: "Curious about bees? Our courses are made for people exactly like you."	Education & Learning
Fri	LINKEDIN	Thought leadership — "Why varroa training matters for SA's beekeeping future." Aphrodite's professional view. 300–400 words. Positions her as the leading local voice. #VarroaMite #Biosecurity #SABeekeeping. Est. writing time: 25 mins	Support & Expertise

Week 3 — Course Promotion and Social Proof

Mon	FACEBOOK	Course announcement + Facebook Event created. Next date, what's covered, who it's for, price (\$159), real photo, direct booking link. Also create the Facebook Event separately for added discoverability.	Education & Learning
Tue	INSTAGRAM	Testimonial carousel — 5-star Google reviews as branded slides. "Aphrodite is a wonderful teacher" (Ulrike). "Mighty Aphrodite — your energy is a wonderful gift" (Leigh). CTA: Link in bio for bookings. Est. Canva time: 30 mins.	Product & Brand
Thu	INSTAGRAM	Behind-the-scenes reel — Aphrodite preparing for a course. Equipment, suits, hive frames. "Another group of beekeepers-to-be about to get hands-on. A few spots still available." CTA: Book via link in bio. Shows the real experience.	Support & Expertise
Fri	LINKEDIN	Professional update — "Learn About Bees now offers structured beekeeping education for all levels in Adelaide, SA." Course overview, accreditation note, booking link. Tag SA agriculture and education networks. B2B version of the course post — targets schools, councils, corporates.	Education & Learning

Week 4 — Community, Seasonal Content and Momentum

Mon	FACEBOOK	Original seasonal post — "Winter hive checklist for SA beekeepers." Practical numbered list by Aphrodite. Varroa monitoring, food supply, condensation, queen check. 100% original. This type of post gets shared within SA beekeeping groups. High community value.	Support & Expertise
Tue	INSTAGRAM	Product story — Aphrodite harvesting honey, golden light. "This jar took 30 years to perfect. Raw. Unfiltered. From my Adelaide hives to your table. \$15 for 500g." Tag local Adelaide foodie accounts for organic reach extension.	Product & Brand
Thu	INSTAGRAM	Story sequence — Poll: "Are you a beekeeper? Yes / Not yet but I want to be." Follow-up for "Not yet" voters: Link sticker to beginner course. Aphrodite in bee suit, friendly. Poll boosts algorithm. Drives course page traffic from genuinely interested audience.	Education & Learning
Fri	FACEBOOK	Monthly wrap-up — "Here's what we've been up to." Summary of courses, honey available, upcoming sessions. Three links: Shop / Book a course / Request support. Pin this monthly. Anchor post that new visitors always see — gives everything in one place.	Product & Brand

The calendar includes platform, post type, content idea, caption direction, CTA, and content pillar. This makes the strategy practical and implementation-ready.

14. Sample Post Mockups

The document includes sample post concepts to show how the strategy could look in practice.

These include raw honey product posts, bee education carousels, varroa support posts, LinkedIn thought leadership content, and Instagram story polls.

The purpose of this section is to move beyond theory and show examples of actual content the client could post.

15. Content Creation Workflow

The strategy includes a content creation workflow with six steps: idea, create, review, schedule, monitor, and improve.

This workflow is designed to make content creation manageable for a small business owner. It encourages batching content, scheduling posts, checking comments, reviewing performance, and improving the next month’s content based on results.

16. Repurposing Strategy

The document explains how one piece of content can be reused across multiple platforms.

For example, one workshop photo set can become an Instagram carousel, a Facebook course update, a LinkedIn professional post, and an Instagram story sequence.

This reduces the workload for the client while still keeping each platform active and relevant.

17. Tool Stack

The strategy recommends practical tools for implementation.

These include Canva for graphics, Meta Business Suite for Instagram and Facebook scheduling, LinkedIn Scheduler for LinkedIn posts, Linktree for link-in-bio, Google Business Profile for local search, Google Analytics for website tracking, CapCut for reels, and Google Sheets or Notion for planning.

The tools are chosen because they are practical, low-cost, and suitable for a small business owner.

18. Ownership Framework

The ownership framework explains what tasks need to be done daily, weekly, fortnightly, monthly, and quarterly.

Daily tasks include checking comments and messages. Weekly tasks include scheduling posts and checking insights. Fortnightly tasks include batch content creation. Monthly tasks include KPI review and content planning. Quarterly tasks include reviewing the overall strategy.

This section makes the strategy realistic and sustainable.

19. Effort vs Impact Matrix

The effort-impact matrix prioritises the recommendations.

High-impact, low-effort actions include fixing the Facebook category, adding social links to the website, setting up Linktree, updating the Instagram bio, posting the next course date, and turning Google reviews into testimonial content.

High-impact, high-effort actions include building the Learn About Bees LinkedIn page, creating consistent reels, developing a monthly calendar rhythm, and building LinkedIn thought leadership.

This section helps the client understand what to do first.

20. 90-Day Implementation Roadmap

The strategy includes a phased 90-day roadmap.

The first phase focuses on foundation work, such as fixing profiles, creating the Learn About Bees LinkedIn page, adding social links, setting up Linktree, and starting the content calendar.

The second phase focuses on building momentum through KPI review, LinkedIn posts, Facebook events, hashtag strategy, and batch content creation.

The third phase focuses on growth through recurring content series, Instagram stories, student reviews, LinkedIn articles, and community engagement.

A later sustainability phase focuses on long-term review, evergreen content, partnerships, and keeping the system manageable.

PHASE 1 Foundation Days 1–30	PHASE 2 Build Days 31–60	PHASE 3 Grow Days 61–90	PHASE 4 Sustain Days 91–180
→ Fix Facebook category to Agricultural Service → Complete Facebook About section with keywords → Configure Facebook CTA button to booking page → Create Learn About Bees LinkedIn business page → Add all social links to website → Set up Linktree link-in-bio → Execute 4-week content calendar from Section 13 → Film first 3 reels during hive visits → Convert Google reviews to testimonial carousel → Post next course date on all platforms ✓ All platforms active. Calendar running. First reel posted. LAB LinkedIn live.	→ Review Phase 1 KPIs — double down on best content → Start LinkedIn thought leadership (1 post/week) → Create first Facebook Event for upcoming course → Build LAB LinkedIn page content strategy → Develop first content series (Seasonal Hive Guide) → Implement consistent hashtag strategy → Update Google Business Profile posts → Reach out to local SA accounts for cross-promo → Set up fortnightly batch content creation session ✓ 100+ IG followers. 150+ FB followers. 50+ LinkedIn connections. Under 3hrs/week to maintain. Social is a reliable course enquiry channel.

21. Quick Wins vs Long-Term Strategy

The document separates immediate actions from longer-term strategic development.

Quick wins include fixing the Facebook category, adding social links, creating the Learn About Bees LinkedIn page, turning Google reviews into content, posting the next course date, setting up Linktree, and updating the Instagram bio.

Long-term actions include building a reel content library, developing Learn About Bees as its own Instagram presence, building LinkedIn authority, launching a seasonal hive content series, creating local partnerships, and reviewing the strategy quarterly.

22. Social Media Risk Register

The strategy identifies risks that could affect implementation.

These include inconsistent posting due to time constraints, inaccurate varroa or biosecurity advice, algorithm changes, negative comments, confusion between Aphrodite's Harvest and Learn About Bees, camera discomfort, and account security issues.

Each risk includes mitigation actions to reduce the chance of failure.

23. Ethical Considerations

The document includes ethical considerations related to privacy, biosecurity accuracy, accessibility, authentic product claims, cultural sensitivity, and third-party content.

This ensures the strategy is not only promotional but also responsible, inclusive, and professionally appropriate.

24. What Not To Do

The strategy includes a section on common mistakes to avoid.

These include posting only product photos, using identical captions across all platforms, overusing technical jargon, relying only on hashtags, confusing Aphrodite's Harvest and Learn About Bees, sharing other organisations' content without adding value, ignoring LinkedIn, and waiting for perfect content before posting.

This section helps guide better decision-making.

25. Client Self-Management Review Framework

The final section provides a review framework so the client can continue managing the strategy after the project.

It includes weekly checks, monthly KPI reviews, quarterly strategy reviews, and simple decision rules. For example, if follower growth stalls, the client can increase reels or community sharing. If followers grow but course enquiries do not, the client can improve calls to action.

Overall Summary

Overall, the document presents a complete social media strategy for Aphrodite's Harvest and Learn About Bees. It moves from audit and analysis to practical implementation.

The strategy identifies the current digital gap, defines target audiences, clarifies platform roles, builds content pillars, creates a posting calendar, recommends tools, sets KPIs, manages risks, and provides a self-management framework.

The main aim is to create a practical, sustainable system that Aphrodite can continue using independently, rather than only providing a one-time content plan.
